PG Management System — Build Status

Against the finalized design (revision 3). Three buckets: what's done, what's new to build, what exists but must be updated.

ALREADY PRESENT	TO BUILD (NEW)	TO UPDATE (CHANGE)
• Phone + OTP login • First-login identity gate (DigiLocker) • Sessions + auto token refresh + logout • Branches, rooms, beds • Bed assign / free (live occupancy) • Residents + full ledger • Cash payments (incl. part-payment) • Instant PDF receipts + branding • Complaints (full state machine) • Move-out settlement + deductions • Maker-checker (edit/delete approvals) • Audit log (owner) • Finance: branch + org • Manager branch isolation • Marketplace browsing: address, search, "near me"	• Owner app PIN (required) • Biometric unlock (optional) • Trusted-device check • Live vacancy on public listings • Enquire action (phone + OTP) • Prospect identity (→ becomes Tenant) • Manager enquiry inbox (owner sees all) • Platform-operator publish gate + billing • Scheduled monthly archive job • Push notifications (FCM + tokens) • Delete a bed • Web + iPhone clients	• Remove password sign-in path • Remove invite-code / redeem step • Invites keyed on phone, not email • Drop the "staff" concept (role-based only) • Collapse manual "link login" step • Rent & deposit editable after creation • Away-days → backend endpoint (staff can see) • Listing publish → "send for approval", not direct

Hamsa Vilas — PG Management System · build status against revision 3. Backend items inferred from the Android app's API layer; confirm against the server directly.
